

Firmware Version 1.6

New Features:

Qu-You Qu-You gives musicians customised personal monitor control on iPhone, iPad and iPod touch. It connects via Wi-Fi to a Qu-16, Qu-24 or Qu-32. Up to 7 iOS devices running Qu-You plus an iPad running Qu-Pad can be used at the same time.

New factory Libraries 56 Library presets are now available in response to a popular user request. Use these as starting points for different instruments or vocals, experiment with the settings and fine tune to suit application and venue.

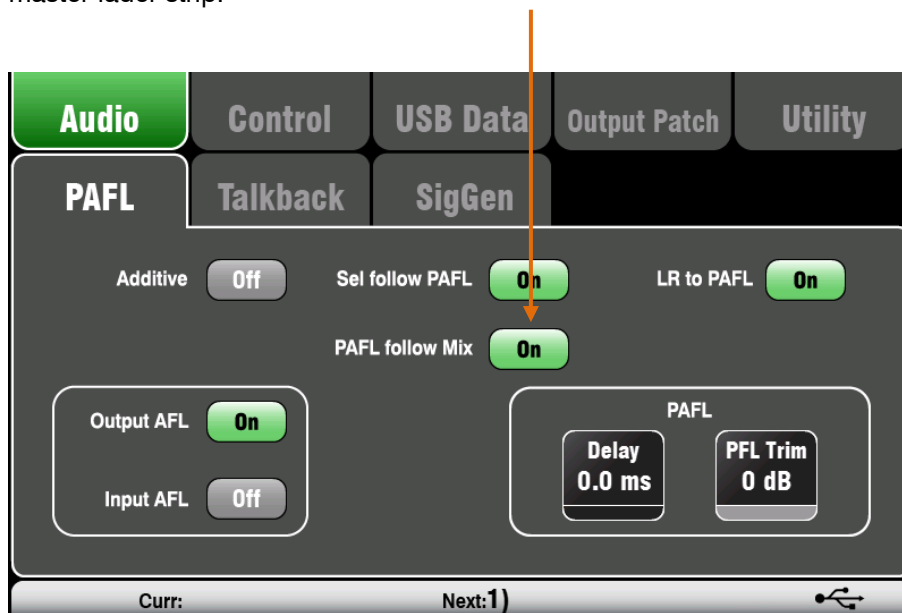

Libraries beginning with ':' are quick starting points to set up channels or processing blocks for different uses

Latching Talkback option Users can now choose between the existing momentary mode (push to talk) and the new latching mode. To access the option go to the **Setup / Audio / Talkback** screen and press the **Fn** (Function) key.

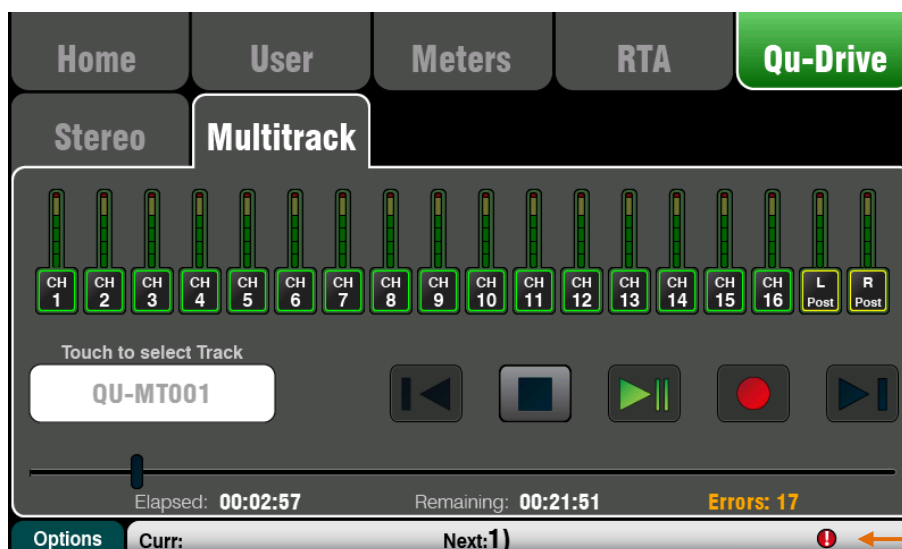

Mac OS X 10.10 Yosemite support V1.6 supports USB streaming with the new Mac operating system.

PAFL follow Mix When this option is active, PAFL will follow the active Mix in the master fader strip.

Error reporting in Qu-Drive multitrack recording The Qu-Drive Multitrack screen now reports the number of errors (buffer overflows) during recording. This helps identifying problems and testing USB keys and hard drives for reliability before critical recordings.

A warning icon appears on the toolbar if any error has been detected.

Other changes:

This release also fixes several minor issues and introduces a number of improvements.

For more information on these and details on new features, please refer to the Release Notes and Qu Mixer User Guide AP9372 on the Allen & Heath [website](#).
