This protocol is for use with the Qu-16 mixer loaded with firmware version V1.20 or later.

Qu transmits MIDI messages when its controls are operated. It also responds to parameter changes it receives via MIDI, for example from a computer, Qu-Pad or an external MIDI controller.

MIDI communicates via:

USB – Rear panel USB B port for direct connection to Apple Mac computers running OSX 10.6 or later. This is the recommended connection for DAW control.

Note USB MIDI is supported natively by Apple Mac computers so no driver is needed. A driver for Windows computers is not available.

TCP – Rear panel network port for use with a computer, a touch panel or other remote controller with configurable MIDI over a TCP/IP port.

Note TCP MIDI requires a driver for the data to be seen as a MIDI port. An Allen & Heath TCP MIDI driver for Apple Mac computers can be downloaded from the iLive Software web page. A driver is not available for Windows computers.

Note Qu currently allows only one TCP connection at a time over its Network port.

The following Qu functions can be controlled via MIDI:

- Mutes
- Faders and Pan
- Mix and FX sends Level, Pan, Assign, Pre/Post
- Mute Groups Assign, Master Mute
- PAFL select
- Input Channel source
- Preamp (local and dSNAKE) Gain, Pad, 48V
- Insert In/Out
- Input Channel processing Trim, Polarity, Gate, PEQ, Compressor, Delay
- Mix Channel processing PEQ, GEQ, Compressor, Delay
- Scene Recall
- FX Tap Tempo

DAW Control for Mac computers:

MIDI fader strips can be assigned to the Custom Layer to work with a DAW (Digital Audio Workstation). These send/receive CC and note on/off messages using a different MIDI channel to that used for the Qu functions described above. The MIDI fader strip sends/receives messages relating to:

- Fader position
- Mute key / indicator
- Sel key / indicator
- PAFL key /indicator

You can work directly with these messages or use the Allen & Heath DAW Control driver to convert them into either of the following popular protocols:

- HUI
- Mackie Control

Note DAW Control is available only for Mac computers. A driver for Windows computers is not available.

Go to the <u>Allen & Heath web site</u> to download the DAW Control driver for Mac and for further information in the DAW Control Setup Notes.

Reference

Refer to the table at the end of this document for value listings.

All MIDI message numbers shown in blue in this document are Hexadecimal

Key Blue Hexadecimal number, eg, F0

Green Variable referred to in table or note, eg, **VA** = parameter value

Red NRPN ID number for parameter type, eg. Polarity = 6A

Orange NRPN Index to specify a second value, eg, VX

MIDI channel number N (see table)

MIDI channel 1 to 16 = 0 to F

Qu functions use MIDI channel = N

MIDI strips (DAW controls) use MIDI channel = N+1

Channel numbers CH (see table)

FX Send 1 to 4 = 00 to 03

FX Return 1 to 4 = 08 to 08

Mute Groups 1 to 4 = 10 to 13

Input 1 to 16 = 20 to 2F

Stereo Channels = 40 to 42

Mix 1 to 10 = 60 to 66

Main LR = 67

Active Sensing

Qu supports MIDI Active Sensing over its TCP/IP Ethernet connection to detect connection status. Qu will send an initial Active Sense byte (FE) once an Ethernet connection is established, and then once every 300ms or so during any period of inactivity.

Qu also responds to Active Sense If it receives an Active Sense byte it will expect to receive regular MIDI data from that point onwards (either valid control data, or more Active Sense bytes during any period of inactivity). If it does not receive any data for 12 seconds, it will close the Ethernet connection.

DAW control

MIDI strips assigned to the Custom Layer can provide DAW control.

DAW messages can be translated into HUI or Mackie Control protocol using a driver which can be downloaded from the <u>Allen & Heath web site</u>.

```
Allen & Heath DAW Control (driver for Mac computer only)
```

DAW messages use a different MIDI channel to other Qu MIDI messages:

```
Qu MIDI channel = N

DAW MIDI channel = N+1
```

MIDI strip controls send and respond to the following messages:

Strip Fader

Control Change message:

```
B(N+1), FD, VA

Where FD = Strip fader 00 to 0F (see table)

VA = Fader min to max position = 00 to 7F
```

Strip keys

The strip keys use **NOTE ON** followed by **NOTE OFF** messages.

Pressing keys send messages.

Key LED indicators respond to received messages.

```
9(N+1), KY, 7F, 9(N+1), KY, 00

Where KY = Mute Strip 1-16 = 00 to 0F (see table)

Sel Strip 1-16 = 20 to 2F

PAFL Strip 1-16 = 40 to 4F
```

Mute control

```
Mute on NOTE ON with velocity > or = 40 followed by NOTE OFF
9N, CH, 7F, 9N, CH, 00

Mute off NOTE ON with velocity < 40 followed by NOTE OFF
9N, CH, 3F, 9N, CH, 00
```

Received Mute messages

```
Velocity 00 and NOTE OFF messages are ignored
Velocity 01 to 3F = Mute off
Velocity 40 to 7F = Mute on
```

NRPN Parameter control

Qu mixer parameters are transmitted and received as MIDI NRPN (Non-Registered Parameter Number) messages. The MSB (most significant byte) selects the mixer channel (CH), and the LSB (least significant byte) selects the parameter number (ID). The data entry MSB sets the parameter value (VA) and LSB sets the index value for its range (VX) where needed.

```
(NRPN MSB) (NRPN LSB) (Data MSB) (Data LSB)
BN, 63, CH, BN, 62, ID, BN, 06, VA BN, 26, VX
```

```

Delay					

Delay FX Time

To set delay time. Can be used for Tap Tempo.

Can use one or two NRPN messages:

Use MSB message only for course time value resolution. Use LSB followed by MSB message for fine resolution.

LSB: BN, 63, CH, BN, 62, 49,

BN, 06, VAf

BN, 26, VX

MSB: BN, 63, CH,

BN, 62, 48,

BN, 06, VAc

BN, 26, VX

Where **VAf** Fine resolution time value = 00 to 7F

VAc Course resolution time value = 00 to 7F

VX Delay parameter 05 = Left tap

07 = Right tap

(See table for examples of time value)

Delay FX Link

To link or unlink the Left and Right tap time.

BN, 63, CH,

BN, 62, 48,

BN, 06, VA

BN, 26, 06

Where **VA** Off (unlinked) = **00**

On (linked) = 7F

Scene Recall

Qu uses Bank Select and Program Change messages for Scene recall. Only Bank 1 is used.

Transmitted Scene message

Qu transmits this message when a Scene is recalled using the touch screen or a SoftKey:

(Bank1 MSB) (Bank1 LSB)

BN, 20, 00,

CN, SS

Recall Scene

Where **SS** = Scene1 to 100 = 00 to 63

(see table)

Received Scene message

Qu responds to the following message if Bank1 is currently selected:

Recall Scene

BN, 00, 00,

CN, SS

Where SS = Scene 1 to 100 = 00 to 63 (see table)

To set Bank1

Qu will ignore Scene change messages if the Bank is not set to 1.

(Bank1 MSB) (Bank1 LSB)

B**N**, 00, 00,

BN, 20, 00

Device Connection

Note Qu currently allows only one TCP connection at a time over its Network port.

TCP Client Configuration

Clients should be configured to use TCP port 51325

Active Sensing

Qu supports MIDI Active Sensing over its TCP/IP Ethernet connection to detect connection status. Qu will send an initial Active Sense byte (FE) once an Ethernet connection is established, and then once every 300ms or so during any period of inactivity.

Qu also responds to Active Sense If it receives an Active Sense byte it will expect to receive regular MIDI data from that point onwards (either valid control data, or more Active Sense bytes during any period of inactivity). If it does not receive any data for 12 seconds, it will close the Ethernet connection.

Sysex Header Sysex Header A&H ID Qu-16 mixer Major/Minor version MIDI channel F0, 00, 00, 1A, 50, 11, 01, 00, 0N

Get System State

An external controller such as an iPad running the Qu-Pad app can use MIDI Sysex messages to request and receive the current parameter state of the Qu mixer.

```
REQUEST:

Sysex Header, 10 <iPadFlag>, F7

Where <iPadFlag> = 1 identifies the incoming connection as Qu-pad.

REPLY:

Sysex Header, 11, <BoxID>, <Version>, F7

Where <BoxID> = 1 identifies the outgoing connection as the Qu-16 mixer <Version> = <Major>, <Minor> = Qu firmware version (7bit data)

Subsequent push of NRPN messages to update current state.

Subsequent End Sync Response:

Sysex Header, 14, F7
```

If <iPadFlag> is set in the initial request the Qu mixer will expect to receive an Active Sense byte within 5 seconds. If not, it will close the Ethernet connection. This is how the lost communication mechanism is enforced for Qu-Pad.

Reference

Refer to the table at the end of this document for value listings.

All MIDI message numbers shown in blue in this document are Hexadecimal

Key Blue Hexadecimal number, eg, F0

Green Variable referred to in table or note, eg, **VA** = parameter value

Red NRPN ID number for parameter type, eg. Polarity = 6A

Orange NRPN Index to specify a second value, eg, VX

MIDI channel number N (see table)

MIDI channel 1 to 16 = 0 to F

Qu functions use MIDI channel = N

MIDI strips (DAW controls) use MIDI channel = N+1

Channel numbers CH (see table)

FX Send 1 to 4 = 00 to 03

FX Return 1 to 4 = 08 to 0B

Mute Groups 1 to 4 = 10 to 13

Input 1 to 16 = 20 to 2F

Stereo Channels = 40 to 42

Mix 1 to 10 = 60 to 66

Main LR = 67

Active Sensing

Qu supports MIDI Active Sensing over its TCP/IP Ethernet connection to detect connection status. Qu will send an initial Active Sense byte (FE) once an Ethernet connection is established, and then once every 300ms or so during any period of inactivity.

Qu also responds to Active Sense If it receives an Active Sense byte it will expect to receive regular MIDI data from that point onwards (either valid control data, or more Active Sense bytes during any period of inactivity). If it does not receive any data for 12 seconds, it will close the Ethernet connection.

DAW control

MIDI strips assigned to the Custom Layer can provide DAW control.

DAW messages can be translated into HUI or Mackie Control protocol using a driver which can be downloaded from the <u>Allen & Heath web site</u>.

Allen & Heath **DAW Control** (driver for Mac computer only)

DAW messages use a different MIDI channel to other Qu MIDI messages:

```
Qu MIDI channel = N
DAW MIDI channel = N+1
```

MIDI strip controls send and respond to the following messages:

Strip Fader

Control Change message:

```
B(N+1), FD, VA

Where FD = Strip fader 00 to 0F (see table)

VA = Fader min to max position = 00 to 7F
```

Strip keys

The strip keys use **NOTE ON** followed by **NOTE OFF** messages.

Pressing keys send messages.

Key LED indicators respond to received messages.

```
9(N+1), KY, 7F, 9(N+1), KY, 00

Where KY = Mute Strip 1-16 = 00 to 0F (see table)

Sel Strip 1-16 = 20 to 2F

PAFL Strip 1-16 = 40 to 4F
```

Mute control

```
Mute on NOTE ON with velocity > or = 40 followed by NOTE OFF 9N, CH, 7F, 9N, CH, 00

Mute off NOTE ON with velocity < 40 followed by NOTE OFF 9N, CH, 3F, 9N, CH, 00
```

Received Mute messages

```
Velocity 00 and NOTE OFF messages are ignored
Velocity 01 to 3F = Mute off
Velocity 40 to 7F = Mute on
```

NRPN Parameter control

Qu mixer parameters are transmitted and received as MIDI NRPN (Non-Registered Parameter Number) messages. The MSB (most significant byte) selects the mixer channel (CH), and the LSB (least significant byte) selects the parameter number (ID). The data entry MSB sets the parameter value (VA) and LSB sets the index value for its range (VX) where needed.

```
(NRPN MSB) (NRPN LSB) (Data MSB) (Data LSB)

Delay FX Time

To set delay time. Can be used for Tap Tempo.

Can use one or two NRPN messages:

Use MSB message only for course time value resolution. Use LSB followed by MSB message for fine resolution.

LSB: BN, 63, CH, BN, 62, 49,

BN, 06, VAf

BN, 26, VX

MSB: BN. 63. CH.

BN, 62, 48,

BN, 06, VAc

BN, 26, VX

Where **VAf** Fine resolution time value = 00 to 7F

VAc Course resolution time value = 00 to 7F

VX Delay parameter 05 = Left tap

07 = Right tap

(See table for examples of time value)

Delay FX Link

To link or unlink the Left and Right tap time.

BN, 63, CH,

BN, 62, 48,

BN, 06, VA

BN, 26, 06

Where VA Off (unlinked) = 00

On (linked) = 7F

Scene Recall

Qu uses Bank Select and Program Change messages for Scene recall. Only Bank 1 is used.

Transmitted Scene message

Qu transmits this message when a Scene is recalled using the touch screen or a SoftKey:

(Bank1 MSB) (Bank1 LSB)

Recall Scene

BN, 00, 00,

BN, 20, 00,

CN, SS

Where SS = Scene1 to 100 = 00 to 63

(see table)

Received Scene message

Qu responds to the following message if Bank1 is currently selected:

Recall Scene

CN, SS

Where SS = Scene1 to 100 = 00 to 63(see table)

To set Bank1

Qu will ignore Scene change messages if the Bank is not set to 1.

(Bank1 MSB) (Bank1 LSB)

BN, 00, 00,

BN, 20, 00

Device Connection

Note Qu currently allows only one TCP connection at a time over its Network port.

TCP Client Configuration

Clients should be configured to use TCP port 51325

Active Sensing

Qu supports MIDI Active Sensing over its TCP/IP Ethernet connection to detect connection status. Qu will send an initial Active Sense byte (FE) once an Ethernet connection is established, and then once every 300ms or so during any period of inactivity.

Qu also responds to Active Sense If it receives an Active Sense byte it will expect to receive regular MIDI data from that point onwards (either valid control data, or more Active Sense bytes during any period of inactivity). If it does not receive any data for 12 seconds, it will close the Ethernet connection.

Sysex Header Sysex Header A&H ID Qu-16 mixer Major/Minor version MIDI channel F0, 00, 00, 1A, 50, 11, 01, 00, 0N

Get System State

An external controller such as an iPad running the Qu-Pad app can use MIDI Sysex messages to request and receive the current parameter state of the Qu mixer.

```
REQUEST:

Sysex Header, 10 <iPadFlag>, F7

Where <iPadFlag> = 1 identifies the incoming connection as Qu-pad.

REPLY:

Sysex Header, 11, < BoxID > , < Version > , F7

Where <BoxID > = 1 identifies the outgoing connection as the Qu-16 mixer < Version > = <Major>, <Minor> = Qu firmware version (7bit data)

Subsequent push of NRPN messages to update current state.

Subsequent End Sync Response:

Sysex Header, 14, F7
```

If <iPadFlag> is set in the initial request the Qu mixer will expect to receive an Active Sense byte within 5 seconds. If not, it will close the Ethernet connection. This is how the lost communication mechanism is enforced for Qu-Pad.
